

05 - Requirements Analysis

1. Purpose

This analysis translates the identified stakeholder and user needs into initial **functional requirements** and **non-functional requirements**.

Functional requirements define **what the system must support**.

Non-functional requirements define the **quality attributes and constraints under which those functions must operate**.

The requirements remain solution-neutral where possible and are traceable to the user needs established in the preceding analysis.

2. Requirements Traceability

Opportunity	User Need	Requirement Area
OP-01	UN-01 — Efficient Investigation Review	Case information, summarisation, risk indicators, investigation actions and human decision control
OP-02	UN-02 — Efficient Decision Recording	Decision reasoning, follow-up actions and structured recording
OP-02	UN-03 — Case Traceability	Chronological history, decision traceability and authorised review

3. Functional Requirements

3.1 UN-01 — Efficient Investigation Review

ID	Functional Requirement	Rationale
----	------------------------	-----------

FR-01	The system shall present relevant information associated with a flagged case in a consolidated case view.	Support efficient review of case information.
FR-02	The system shall provide a concise summary of key case information.	Reduce effort required to understand the overall case.
FR-03	The system shall highlight relevant risk indicators associated with the case.	Direct analyst attention to information requiring consideration.
FR-04	The system shall allow the analyst to perform relevant case actions, including dismissing, escalating or requesting further review.	Support progression of the investigation.
FR-05	The system shall require an authorised human analyst to make the final compliance decision.	Preserve human judgement and oversight.

3.2 UN-02 — Efficient Decision Recording

ID	Functional Requirement	Rationale
----	------------------------	-----------

FR-06	The system shall capture the analyst's reasoning associated with the final case decision.	Preserve the justification for the decision.
FR-07	The system shall capture subsequent actions associated with the case decision.	Connect the decision with resulting actions.
FR-08	The system shall organise required decision information using a consistent record structure.	Reduce reliance on analysts manually structuring case documentation.

3.3 UN-03 — Case Traceability

ID	Functional Requirement	Rationale
FR-09	The system shall maintain a chronological record of relevant case events and decisions.	Enable reconstruction of the case lifecycle.
FR-10	The system shall associate decision reasoning with the corresponding case decision.	Preserve the relationship between reasoning and outcome.
FR-11	The system shall associate subsequent actions with the relevant case decision.	Maintain end-to-end traceability.

FR-12	The system shall allow authorised reviewers to retrieve and review the case history.	Support management, review and audit activities.
--------------	--	--

4. Non-Functional Requirements

4.1 Accuracy

NFR-01 — Information Accuracy

Information presented in the case view and any generated summary must accurately reflect the available underlying case information.

The system should not introduce unsupported information into the investigation record.

4.2 Human Oversight

NFR-02 — Human Decision Authority

The final compliance decision must remain under the control of an authorised human analyst.

System-generated information may support the investigation but must not replace final human judgement.

4.3 Performance

NFR-03 — Investigation Performance

Case information and summaries should load within a timeframe suitable for an operational investigation workflow.

A quantitative response-time threshold remains to be established through stakeholder or prototype validation.

4.4 Consistency

NFR-04 — Record Consistency

Compliance case records should follow a consistent structure for equivalent types of information and actions.

4.5 Usability

NFR-05 — Recording Usability

Recording decision reasoning and subsequent actions should require minimal unnecessary manual effort while still capturing required information.

4.6 Auditability

NFR-06 — Case Auditability

The case history must provide sufficient information for an authorised reviewer to trace relevant events, reasoning, decisions and subsequent actions.

4.7 Integrity

NFR-07 — Record Integrity

Historical case information must be protected against unauthorised or untraceable alteration.

Changes to information forming part of the case history should not silently overwrite the historical record.

4.8 Authorisation

NFR-08 — Access Control

Case information and case histories must only be accessible to appropriately authorised users according to their permitted responsibilities.

5. Requirements Traceability Matrix

Req. ID	Type	User Need	Opportunity	Requirement
FR-01	Functional	UN-01	OP-01	Consolidated case information
FR-02	Functional	UN-01	OP-01	Concise case summary
FR-03	Functional	UN-01	OP-01	Highlight risk indicators

FR-04	Functional	UN-01	OP-01	Support investigation actions
FR-05	Functional	UN-01	OP-01	Human final decision
FR-06	Functional	UN-02	OP-02	Capture decision reasoning
FR-07	Functional	UN-02	OP-02	Capture subsequent actions
FR-08	Functional	UN-02	OP-02	Consistent record structure
FR-09	Functional	UN-03	OP-02	Chronological case history
FR-10	Functional	UN-03	OP-02	Link reasoning to decision
FR-11	Functional	UN-03	OP-02	Link actions to decision
FR-12	Functional	UN-03	OP-02	Authorised case-history review
NFR-01	Non-Functional	UN-01	OP-01	Accuracy
NFR-02	Non-Functional	UN-01	OP-01	Human oversight
NFR-03	Non-Functional	UN-01	OP-01	Performance

NFR-04	Non-Functional	UN-02	OP-02	Consistency
NFR-05	Non-Functional	UN-02	OP-02	Usability
NFR-06	Non-Functional	UN-03	OP-02	Auditability
NFR-07	Non-Functional	UN-03	OP-02	Integrity
NFR-08	Non-Functional	UN-03	OP-02	Authorisation

6. Requirement Boundaries

The requirements establish the following boundaries for subsequent solution design:

System responsibility

Consolidate information → summarise relevant information → highlight indicators → support investigation actions → structure records → maintain traceability

Human responsibility

Review evidence → interpret information → apply professional judgement → determine final compliance decision

No requirement establishes a need for fully autonomous compliance decision-making.

7. Outstanding Requirement Validation

Area	Current Limitation	Required Validation
Case information	Exact information required by analysts is not established.	Analyst interview / process analysis

Summary	Required content and acceptable accuracy threshold are not established.	Prototype testing / stakeholder review
Risk indicators	Exact indicators and presentation rules are not established.	Compliance SME validation
Performance	No quantitative response-time target is established.	User testing / operational requirement
Record structure	Required fields are not fully established.	Compliance/process review
Audit history	Exact retention and history requirements require detailed regulatory/internal analysis.	Regulatory and internal policy analysis
Access control	Specific roles and permissions are not established.	Role/access analysis
