

09 - Product Backlog & Acceptance Criteria

10 — Product Backlog & Acceptance Criteria

1. Purpose

This stage converts the **Release 1 — MVP items from the User Story Map** into formal, implementation-ready user stories.

Each backlog item defines:

- the user performing the action;
- the capability required;
- the value provided;
- its priority; and
- testable acceptance criteria.

The backlog also establishes the handoff from **business analysis into development and QA**, allowing each requirement to be implemented and subsequently verified.

2. User Story Format

User stories follow the structure:

As a [user],
I want to [capability/action],
so that [value/outcome].

Acceptance criteria use **Given–When–Then**:

Given [precondition/context],
When [action/event],
Then [expected system behaviour].

3. MVP Product Backlog

US-01 — Open Flagged Case

Priority: Must Have

Traceability: FR-01

As a Compliance Analyst,
I want to open a flagged case assigned to me,
so that I can begin reviewing the case for investigation.

Acceptance Criteria

AC-01

Given a flagged case has been assigned to the analyst,
When the analyst opens the case,
Then the system displays the available case information.

AC-02

Given the analyst is not authorised to access a case,
When the analyst attempts to open it,
Then access is denied.

US-02 — View Case Information

Priority: Must Have

Traceability: FR-01

As a Compliance Analyst,
I want to view relevant case and transaction information in one place,
so that I can review the case without unnecessarily navigating between multiple sources.

Acceptance Criteria

AC-01

Given an analyst has opened a case,
When the case view loads,
Then the system displays the available information relevant to the investigation.

AC-02

Given some expected case information is unavailable,
When the case is displayed,
Then the unavailable information is clearly indicated rather than presenting unsupported information.

US-03 — View AI-Assisted Case Summary

Priority: Must Have

Traceability: FR-02, NFR-01, NFR-02

As a Compliance Analyst,
I want to view an AI-assisted summary of the case,
so that I can quickly understand the key information before conducting my detailed review.

Acceptance Criteria

AC-01

Given case information is available,
When the analyst opens the case summary,
Then the system presents a concise summary based on the available case information.

AC-02

Given information required for the summary is unavailable,
When the summary is generated,
Then the system does not fabricate or present the unavailable information as fact.

AC-03

Given an AI-assisted summary has been generated,
When it is presented to the analyst,
Then it is identifiable as AI-generated supporting information and does not represent a final compliance decision.

US-04 — Review Supporting Evidence

Priority: Must Have

Traceability: FR-01

As a Compliance Analyst,
I want to review the evidence associated with a flagged case,
so that I can assess the case using the available supporting information.

Acceptance Criteria

AC-01

Given supporting evidence exists for a case,
When the analyst reviews the case,
Then the system makes the relevant evidence available for review.

AC-02

Given an evidence item is associated with the case,
When it is displayed,
Then the system maintains its association with the corresponding case.

US-05 — View Risk Indicators

Priority: Should Have

Traceability: FR-03

As a Compliance Analyst,
I want to see relevant risk indicators highlighted,
so that I can identify information requiring closer investigation.

Acceptance Criteria

AC-01

Given relevant risk indicators have been identified,
When the analyst reviews the case,
Then the system clearly distinguishes those indicators from general case information.

AC-02

Given no supported risk indicator is available,
When the case is displayed,
Then the system does not create unsupported risk indicators.

US-06 — Identify Information Sufficiency

Priority: Must Have

Traceability: FR-04

As a Compliance Analyst,
I want to determine whether sufficient information is available,
so that I can either continue the investigation or request additional information.

Acceptance Criteria

AC-01

Given the analyst has reviewed the available case information,
When the analyst determines that additional information is required,
Then the system allows the analyst to proceed with an information request.

AC-02

Given the analyst determines that sufficient information is available,
When the investigation continues,
Then the analyst can proceed to evaluate the case outcome.

US-07 — Request Additional Information

Priority: Must Have

Traceability: FR-04

As a Compliance Analyst,

I want to request additional information for an incomplete investigation,
so that I can obtain the information required to continue reviewing the case.

Acceptance Criteria

AC-01

Given additional information is required,

When the analyst submits an information request,

Then the request is associated with the relevant case.

AC-02

Given additional information becomes available,

When it is added to the case,

Then the case is updated without removing the existing investigation information.

US-08 — Review Updated Case

Priority: Must Have

Traceability: FR-04

As a Compliance Analyst,

I want to review newly added case information,

so that I can reassess whether sufficient information exists to make a decision.

Acceptance Criteria

AC-01

Given additional information has been added,
When the analyst reopens or refreshes the case,
Then the updated information is available for review.

AC-02

Given the analyst has reviewed the updated information,
When the review is completed,
Then the analyst can reassess information sufficiency.

US-09 — Determine Case Outcome

Priority: Must Have

Traceability: FR-04, FR-05, NFR-02

As a Compliance Analyst,
I want to dismiss or escalate a reviewed case,
so that the investigation can proceed according to my assessment.

Acceptance Criteria

AC-01

Given the analyst has completed the required case review,
When the analyst determines the case outcome,
Then the system allows the analyst to select an available case action.

AC-02

Given a final analyst decision is required,
When the system provides supporting information or AI assistance,
Then the system does not independently make or submit the final compliance decision.

US-10 — Record Decision Rationale

Priority: Must Have

Traceability: FR-06, FR-08

As a Compliance Analyst,

I want to record the reasoning behind my case decision,

so that the basis for the decision can be understood during subsequent review.

Acceptance Criteria

AC-01

Given the analyst selects a case outcome,

When the decision is submitted,

Then the system records the associated decision rationale.

AC-02

Given decision rationale is required,

When the analyst attempts to complete the decision without providing it,

Then the system prevents completion and identifies the missing required information.

US-11 — Maintain Case Audit History

Priority: Must Have

Traceability: FR-07–FR-11, NFR-06, NFR-07

As an authorised reviewer,

I want to view a chronological history of the case,

so that I can trace the evidence, reasoning, decisions and subsequent actions associated with the investigation.

Acceptance Criteria

AC-01

Given a relevant case event occurs,

When the event is recorded,

Then the audit history records the event with its associated user and timestamp.

AC-02

Given a decision has been made,

When the audit history is reviewed,

Then the decision can be associated with its recorded rationale and subsequent action.

AC-03

Given historical case information has already been recorded,

When subsequent case activity occurs,

Then the existing history is preserved without silent overwrite.

US-12 — Escalate Case for Review

Priority: Must Have

Traceability: FR-07, FR-12

As a Compliance Analyst,

I want to route an escalated case to an authorised reviewer,

so that cases requiring further assessment can continue through the appropriate review process.

Acceptance Criteria

AC-01

Given the analyst selects an escalation outcome and records the required rationale,
When the escalation is submitted,
Then the case is marked as escalated and made available for authorised review.

AC-02

Given a case has been escalated,
When an authorised reviewer accesses it,
Then the reviewer can access the relevant case history and recorded decision information.

US-13 — Close Dismissed Case

Priority: Must Have

Traceability: FR-07

As a Compliance Analyst,
I want to close a dismissed case,
so that completed investigations are clearly identified and retained as part of the case history.

Acceptance Criteria

AC-01

Given the analyst selects a dismissal outcome and provides the required rationale,
When the decision is submitted,
Then the system records the decision and closes the case.

AC-02

Given a case has been closed,
When an authorised user reviews its history,
Then the recorded decision, rationale, relevant evidence and case events remain retrievable.

4. Backlog Summary

ID	Backlog Item	Priority
US-01	Open Flagged Case	Must
US-02	View Case Information	Must
US-03	View AI-Assisted Case Summary	Must
US-04	Review Supporting Evidence	Must
US-05	View Risk Indicators	Should
US-06	Identify Information Sufficiency	Must
US-07	Request Additional Information	Must
US-08	Review Updated Case	Must
US-09	Determine Case Outcome	Must
US-10	Record Decision Rationale	Must
US-11	Maintain Case Audit History	Must
US-12	Escalate Case for Review	Must
US-13	Close Dismissed Case	Must
